## K05001ABS – Soft Close Upgrade

The above kit (grey components) replace both the track mounted end stop and the front hanging carriage. The soft close unit catches the door on the last few centimetres of closing and draws it to the fully closed position. The unit is reset by the user opening the door. (Nb. the reset motion has some tactile resistance in the first few cms of opening)

Replace the track mounted end stop, pushing the long metal arm along the track

Fix the track arm through the oval countersunk hole and through the track itself using the No6 self drilling screw

Replace the existing leading edge hanging carriage with the damper mounted unit
